

University of Connecticut  
*Division of Business and Administration*

Architectural and  
Engineering Services

**Foreword**

These Planning and Design Standards have been compiled for use by the University's Office of Architectural and Engineering Services and architects and engineers retained to provide services for the University of Connecticut. They reflect the planning, construction, operation and maintenance experiences of those persons responsible for the University's facilities at the main campus in Storrs and for all branch campuses.

Adherence to these Standards is not mandatory, except where specifically stated as such. Any equal or improved concept, method or product will be given full consideration, however, deviations should be reviewed with the University's Project Coordinator for approval, prior to incorporation into any project.

The Standards are not intended to be used as specification items. The architects and engineers are expected to incorporate the Standards using their own wording and format, unless otherwise directed.

It is planned to revise these Standards as experience or construction developments warrant. This edition supersedes all previous editions and directives concerning construction practices for the University of Connecticut.
