

## SP.2 UTILITIES DESIGN

- A. Where possible, all utilities should come into one area in the building.
- B. Excavation plans should indicate all underground utilities and the effects of new grading should be carefully coordinated with existing utilities and other appurtenances.
- C. All existing and new utilities shall be shown on one drawing to make apparent any interference's and to help in coordinating the connection of new utility systems to the existing.
- D. All new and existing utilities are to have profile drawings to show elevations for construction and clearances from other utilities.
